

# Polar

**CONSTRUCTION:** wood-aluminium

**PROFILE LINE:** soft or classic

**PROFILE WIDTH:** standard

## Use

The POLAR program is intended for highly energy-efficient buildings. It is compliant with relevant standards for passive houses. The low heat transfer coefficient of this product is achieved by inserting an additional polyurethane profile between the wood and the aluminium, but the functionality and aesthetics of the product are fully preserved.

## Advantages

- Extremely low heat transfer coefficient
- An energy-saving solution

## Choice

Smart choice – initial investment is fully recovered in four to seven years through energy savings.
